

Counteract Balancing Beads is the only tire and complete wheel-end balancing product proven to improve fuel economy in two independently run SAE J1321/TMC RP-1102 Type II Fuel Tests. These two tests are backed by the American Trucking Association and Counteract has proven a fuel savings of 2.2% in commercial trucks with the use of Counteract in all wheel positions.

Easy Installation

The bag-in-bag application makes it easy to install. Simply throw the inner bag into the tire when the tire is broken down. The product can also be easily injected into the tire through the valve stem.

Increase tire life

By reducing rolling resistance - This in turn, reduce tire wear. When a tire and complete wheel assembly is properly balanced, it also ensures a more even wear, all of which increases tire life. Increased tire life allows you to use the same tires longer, ultimately saving you money.

Improve fuel economy

There is a marked increase in fuel consumption over 55 mph which is to a great extent, caused by a resonating suspension synchronizing with an out of balance wheel assembly. The longer the run at highway speeds with balanced wheel assemblies, the greater the fuel saving!

Reduce maintenance costs

Heavy vibration for extended periods of time is one of the leading causes of maintenance issues as related to almost all aspects of any ride. Once you have balanced the wheel assembly completely, you will find that most things that are attached to it won't wear out nearly as quickly.

COUNTERACT Balancing Beads for Trucks

Order No.	Size	Qty.	Case Qty
64000	3 oz.	1 bag	Order in lots of 96
64001	4 oz.	1 bag	92
64042	5 oz.	1 bag	76
64002	6 oz.	1 bag	64
64003	8 oz.	1 bag	52
64004	10 oz.	1 bag	40
